PPCFall2023**

# Session Feedback Surveys

*We really want to hear from YOU!*

*In the pursuit of making next year's Microsoft Power Platform Conference even better, we want to hear your feedback about this session.*

## ***Here's How -***

- *Simply go to the Whova App on your smartphone*
- *Scroll down on the Microsoft Power Platform Conference Homepage to 'Additional Resources' to click "Surveys".*
- *Click Session Feedback.*
- *Scroll down to find this session title.*
- *Complete the session feedback survey.*
- *Finally, click 'Submit'*

*It's just that easy!*

# Agenda

Hyper(scale) Dataverse - How Dataverse helps to scale your business

Use of Power Platform Dataflows to load data into Dataverse at scale to enable Apps

Long term retention – cost-effective regulatory compliance and historic reporting

Elastic tables - load data at high scale fast

## Hyperscale to any business workload

### Unlimited scale and storage

Increased operational efficiency  
and storage cost management

### Performance

High speed, low-latency  
data ingestion

### Long term retention

Unlock app and data agility for  
all business applications

## One platform, endless possibilities

'One size fits all'

- Dataverse grows with business
- Build apps and analytics in real time with all skill levels and any data scale
- IT advantage of Power Platform on Dataverse
- Dataverse continues to protect your data from emerging risks, keep it compliant and retain relevant data over time

# Activating Enterprise Data is complicated

## Challenges for IT

Data Compliance

Development Costs

Data Governance

Technology Agility

## Challenges for employees

Data Access

Data Silos

Data Literacy

Business Agility

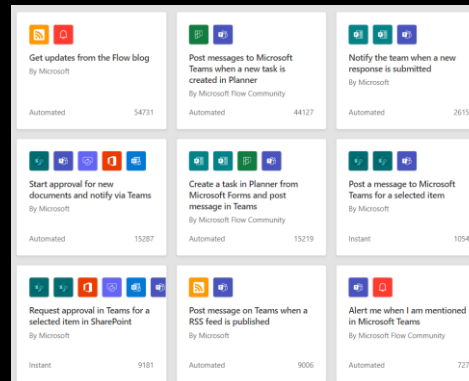

1

1000+ shared connectors

2

Enterprise app templates

3

Leverage the best of the platform

- Leverage data where it is – Virtual Tables 
- AI to assist data migration
  - ETL with Power Platform Data Flows
  - Access2Table(s)
  - Excel2Table
- Generate Insights and Extend through Microsoft Fabric

# Enterprise grade scale with Dataverse

Unlimited scale and storage

Long Term Retention

Elastic Tables

Dataflows Templates

- Easily ingest data from different data sources with data flow templates
- Support high volume highly scalable enterprise scenarios with Dataverse Elastic tables
- Save \$ on in-active data

## What's NEXT

- Solution aware Power Platform Dataflows
- Dataverse API to manage PP Dataflows
- Elastic tables (GA end of CY)
- Long term retention – GA Oct

# Context and storyline

**Contoso** is a major retail company that has a fast-growing loyalty program driving increased business transaction and data growth. The program has over 41TB of data and is quickly becoming costly to maintain and support multiple data sources from external and third-party systems including SAP.

Today they must use multiple processes to extract data across several environments, store that data into a single environment, build extensive adaptors and plugins to get high performance access to the data and then use a manual process to offload the data onto another system for their auditing and analytics that supports their long-term retention policies and guidelines.

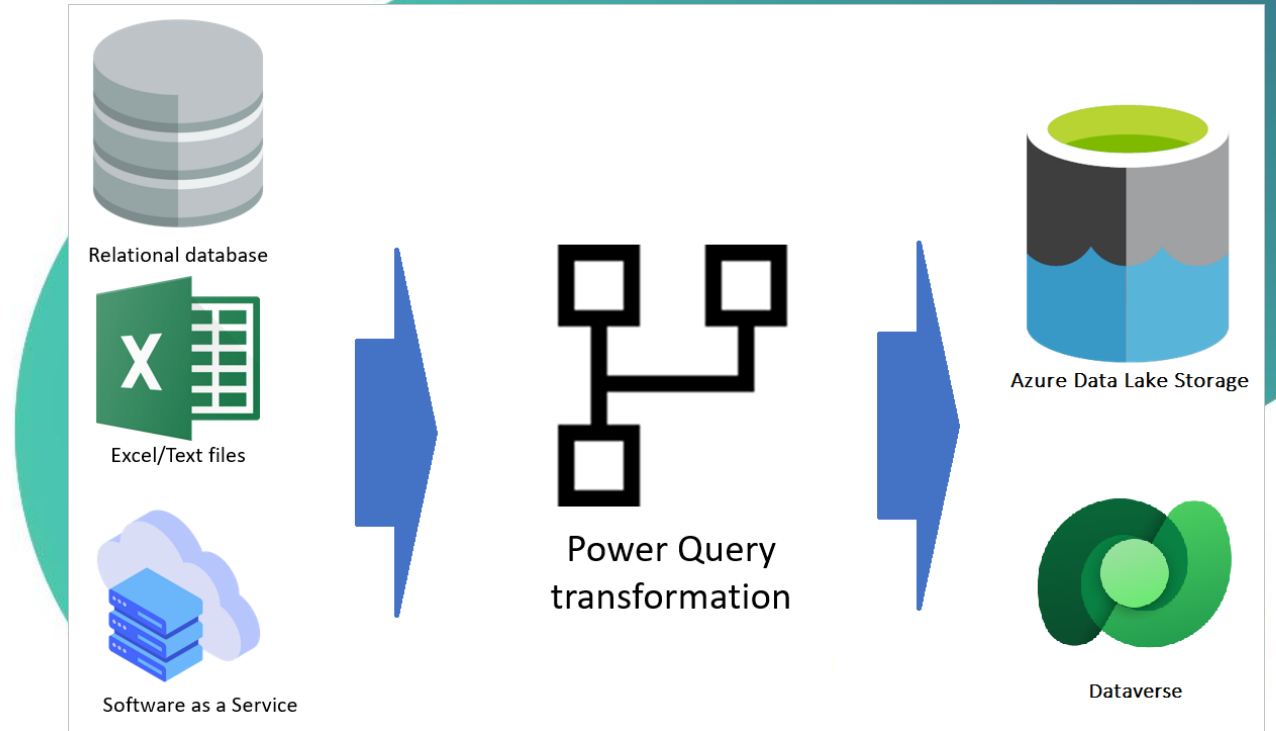

Dataverse Hyperscale can help solve many of their issues in a cost-effective way from data importing, to high capacity and throughput that incorporates security and governance along with user access to data with Power BI integrations to their applications and long-term retention of data that helps drive efficiencies across their platform and environment.

# Hyper(scale) Dataverse

# Demystify Power Platform Dataflows

# What are Power Platform Dataflows

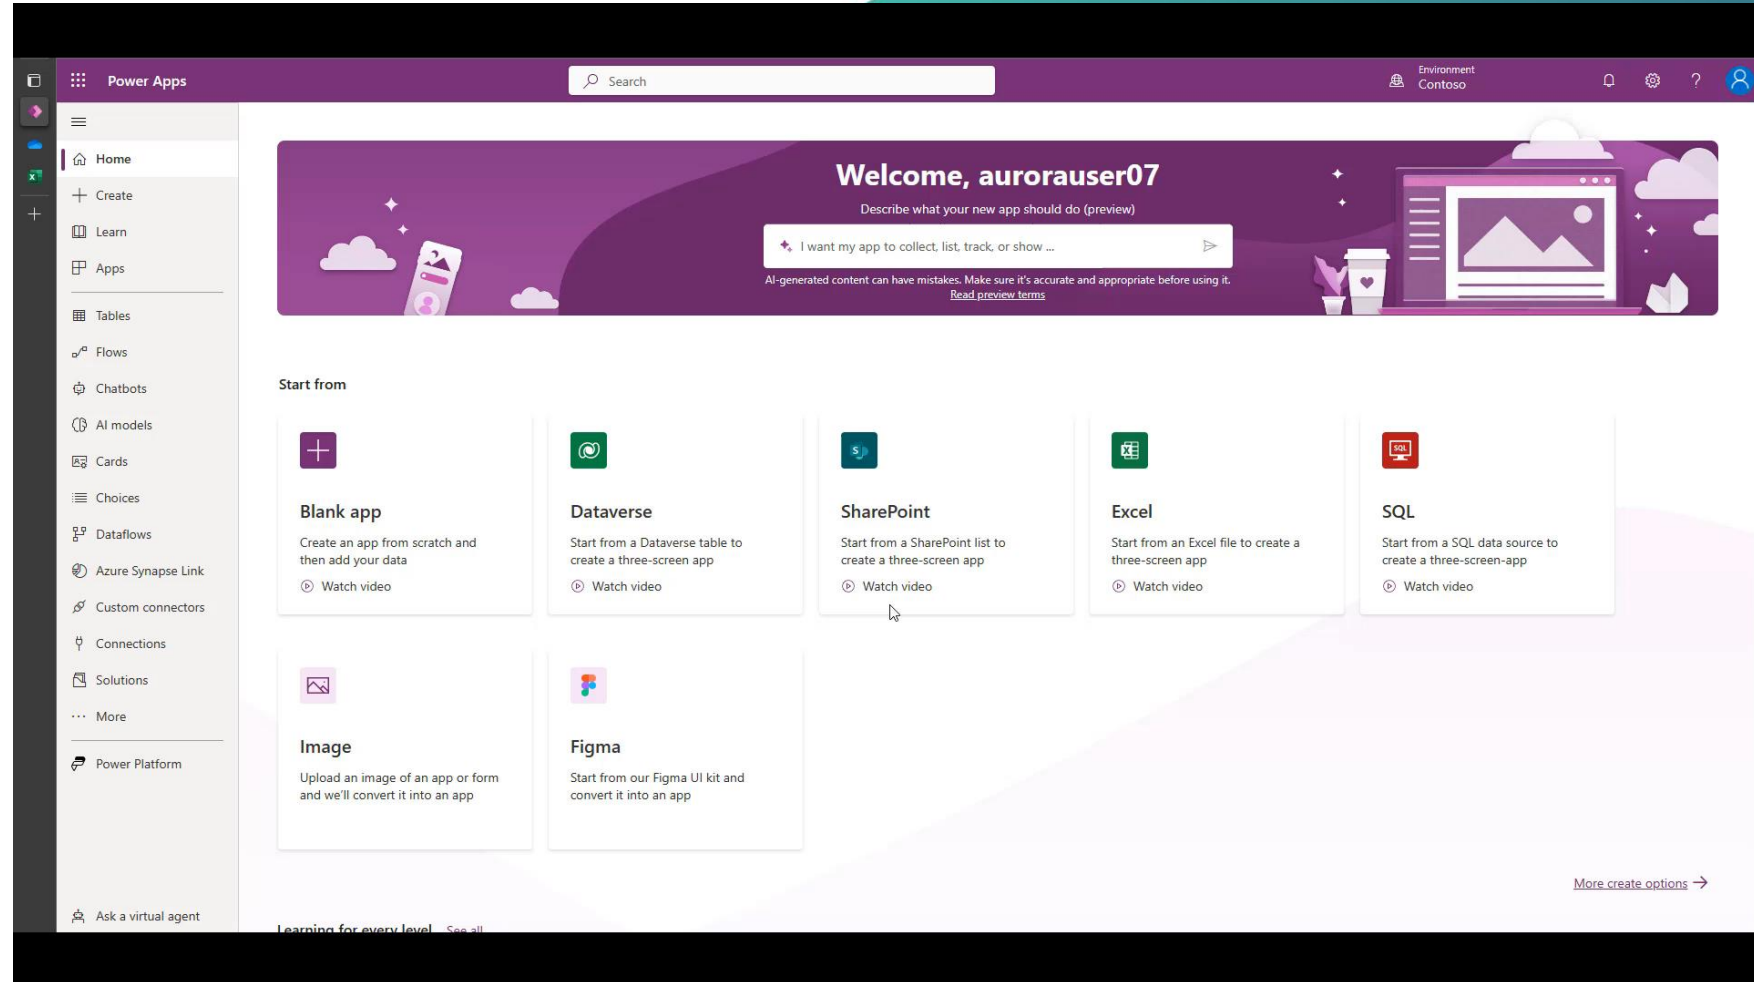

- Dataflows are a self-service, cloud-based, data preparation technology.
- Dataflows enable customers to ingest, transform, and load data into Microsoft Dataverse environments, Power BI workspaces, or your organization's Azure Data Lake Storage account.
- Dataflows are authored by using Power Query, a unified data connectivity and preparation experience already featured in many Microsoft products, including Excel and Power BI.
- Customers can trigger dataflows to run either on demand or automatically on a schedule; data is always kept up to date.

# Use Power Platform Dataflows

## Benefits of Power Platform Dataflows

- Incorporate existing data into Dataverse
- Build apps and create quick and easy visualizations of the data
- Free up business users from complexities of building data pipelines
- Help IT pros to build data pipelines for business users
- Use well known Excel, Power Query and Dataverse

# **Dataverse Long Term Retention**

# Dataverse Long Term Retention

- Securely retain historical data long term in Dataverse
- Reduce historical data in live application and database capacity consumed
- Avoid IT investment to build and maintain custom solutions
- Save 50% or more on every GB moved to Dataverse LTR (based on preview)

 Microsoft Power Platform

## Dataverse Long Term Retention

# **Dataverse Elastic Tables**

# Dataverse Elastic Tables

- Handle large data volumes in real-time with high throughput/storage and low latency requirements.
- Leverage existing investment by creating relationships between Elastic tables and standard tables.
- Time to live values for auto removal of large volumes of data with short data-life
- Store and query data with flexible schema (Json format attributes) without the need for pre-defined schemas

## Dataverse Elastic Tables

**Reference and call to action**

# Documentation

- [An overview of dataflows across Microsoft Power Platform and Dynamics 365 products - Power Query | Microsoft Learn](#)
- [Importing and exporting data - Power Apps | Microsoft Learn](#)
- [Dataverse long term data retention overview - Power Apps | Microsoft Learn](#)
- [Elastic tables for developers \(preview\) - Power Apps | Microsoft Learn](#)
- [Create and edit elastic tables \(preview\) - Power Apps | Microsoft Learn](#)

## Call to action

- Move data into Dataverse using Power Platform Dataflows
- Create and use Dataflow templates
- Define data candidates and implement Long Term Retention practice
- Use Elastic Tables to move large data into Dataverse fast

# Microsoft Business Applications Launch Event

Experience the new era of AI-powered business

Get an in-depth look at the latest AI innovations across Microsoft Dynamics 365 and Microsoft Power Platform at the Microsoft Business Applications Launch Event.
